Hashimoto's Thyroiditis is an autoimmune disease in which the body's immune system turns against itself and attacks the thyroid gland. This is also known as chronic lymphocytic thyroiditis and Hashimoto's disease. Hashimoto's thyroiditis is the most common cause of hypothyroidism. The symptoms of Hashimoto's thyroiditis may go unnoticed because they are progressive and mild in the early stages. Common symptoms include fatigue, constipation, dry skin, fluid retention, and depression. Treatment options include medication, radiation, and surgery. It is important to seek medical attention if you suspect you may have Hashimoto's thyroiditis, as it can lead to serious complications if left untreated.
