Homeostatic model assessment homa is a method used to quantify insulin resistance and beta cell function. It was first described under the name HOMA by Matthews.

HOMA is a measure of insulin resistance and is calculated as:

\[ \text{HOMA} = \frac{\text{Fasting Plasma Insulin} (\mu U/mL) \times \text{Fasting Blood Glucose} (mg/dL)}{405} \]

HOMA IR (insulin resistance) is calculated as:

\[ \text{HOMA IR} = \frac{\text{Fasting Plasma Insulin} (\mu U/mL) \times \text{Fasting Blood Glucose} (mg/dL)}{22.5} \]

HOMA for the healthy human is typically less than 1.5.

Objective: The primary objective of the HOMA test is to quantify insulin resistance and beta cell function.

Insulin sensitivity and insulin secretion determined by HOMA.

VALIDATED AND APPLIED FOR QUANTIFYING HOMA TO CONNECT WITH HOMA BA AND OTHERS YOU MAY KNOW FACEBOOK GIVES PEOPLE THE POWER TO SHARE AND MAKE THE
